

The information on this webpage provides a platform for homebuyers to make a more informed decision when buying a home. Search and compare CONQUAS/Quality Mark performance of housing developments, developers and contractors in Singapore which reflects their workmanship quality standard.

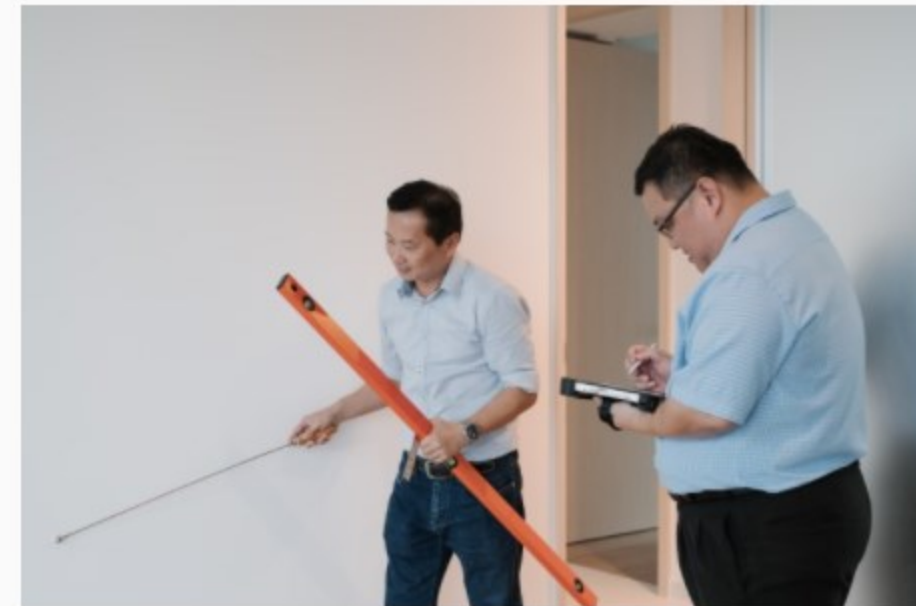

The Construction Quality Assessment System (CONQUAS) was designed to standardise quality assessment of workmanship in structural works, architectural works and mechanical and electrical works, by sampling.

The BCA Quality Mark scheme assesses internal finishes in every newly completed housing unit of the project. In view of the more thorough assessment of finishes, homeowners experienced a much lower rate of defects in Quality Mark-assessed projects, according to an independent survey conducted by J.D. Power* in 2015.

**A survey on workmanship quality of Quality Mark vs non-Quality Mark residential properties was conducted by global market research consultant, J.D. Power in 2015.*

Private residential projects are ranked according to their Quality Mark performance in the last five years. Developers and contractors are ranked according to their average Quality Mark performance in the last five years (minimum 3 projects). Rankings are updated quarterly. [September 2017]

The ranking is based on the statistical average gathered from the scores of the Quality Mark projects undertaken by these developers/contractors. Persons accessing this website are encouraged to also carry out your independent checks as may be necessary or appropriate.
